

# Automotive Films

3M is a leader in creating technology-advanced window films.

Our latest achievement is the creation of premium auto window films that hold their colour.

## **3M™ Scotchtint™ Colour-Stable Panther Auto Film**

3M has developed a patented technology for producing window film that incorporates a unique process not found in conventional films.

Never before has anyone done this.

In fact, it's so advanced that in time-based tests, 3M™ Scotchtint™ Colour-Stable Panther Auto Film held its colour while most conventional dyed films rapidly changed to a purple colour.

### **No purple windows. Guaranteed**

3M's revolutionary Colour-Stable Auto Films maintain their colour and never fade to purple. We guarantee it!

### **Look good. Feel good**

3M's Colour-Stable Panther Auto Film incorporates a unique process that allows for maximum heat rejection. Not only does your car look great on the outside, but inside you get protection from the sun's heat, ultra-violet rays and glare.

- Reduce Heat Gain by 41%
- Reduce Glare by 82%

3M Colour Stable film Auto Film will help make your car cool and comfortable with less drain on your cars air-conditioning. Because our films block out 99 percent of the sun's damaging ultraviolet rays, we protect your cars' interior; Cloth and leather interiors are less likely to fade, crack and peel and are not as warm to the touch.

### **Great looks and safety, too.**

In addition to its fantastic appearance, 3M Colour-Stable Auto Film helps to keep you and your passenger's safe during an accident by holding glass in place. Plus, not only does the film prevent shards of flying glass, the tint can hinder thieves from seeing into your vehicles.

### **We stand behind our work.**

Trained, approved 3M Autotinters will ensure a quality installation and that your vehicle complies with Section 32 of the Road Vehicles (Construction and Use) Regulations 1986 (70% visible light transmission for front side windows).
